

Appl. No. 09/780,281

Response to Office Action of July 12, 2005

**Amendments to the Specification:**

Please replace the abstract beginning at page 26, line 2 with the following rewritten paragraph:

A controlling apparatus, record medium, and method, which include the steps of (a) obtaining control information from the electronic devices, the control information allowing the electronic devices to be controlled, (b) determining whether or not the electronic devices have a time setting function corresponding to the control information obtained at the step (a), (c) obtaining time information, and (d) ~~setting the time information obtained at the step (e) to each~~ of the electronic devices determined as devices having the time setting function at the step (b) to the time information obtained at the step (c). Thus, even if an electronic device connected to a network system does not have a function for obtaining time information through the network system, time corresponding to time information can be set to for the electronic device.

Please replace the paragraph beginning at page 2, line 20 with the following rewritten paragraph:

As a result, according to the controlling apparatus, even if an electronic device connected to a network system does not have a function for obtaining time information through the network system, time corresponding to time information can be set to for the electronic device.
